INDOOR V/S OUTDOOR CONVEX MIRRORS

The difference between choosing an indoor and an outdoor convex mirror is the support, weatherproof seals and the brackets. The indoor mirrors come with chipboard or even with no support at all. The outdoor mirrors have to withstand the external elements; hence they usually have a weather-resistant backing.

DISTANCE & ANGLE : Placement of convex mirror, its size and shape matter a lot. Define your viewing distance and select a mirror of a size and curvature that fits your needs perfectly. Suppliers like us can help you with an expert advice in case you have any questions about distance and angle required.

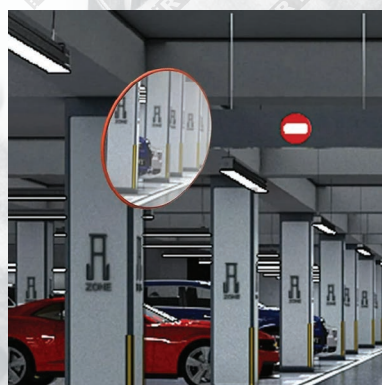

MATERIAL : Convex mirrors come in a range of materials including polycarbonate face and acrylic.

Polycarbonate - It has good reflective properties and is virtually unbreakable. It is recommended in places where high security is demanded.

Acrylic - It provides a clear reflection, withstanding strong impacts. It is recommended where convex mirrors are unlikely to be vandalised.

PROPERTIES : While determining the right convex mirror, need to consider Heat resistant | UV resistant | Frost resistant | Fog resistant | Self-cleaned

INSTALLATION : You should also consider the installation options. All our convex mirrors are really easy to install either on a wall or a post. They are supplied with a free post mount bracket so that they can be installed easily onto any standard post. If you need to install your convex mirror onto a wall, we can supply a wall mount bracket for a small additional cost. All you need is an impact drill with the right drill bit and a socket set to suit the bolts which we will supply

DISTANCE GUIDE	
Size	Combined Distance
30cm	Upto 12 Metres
45cm	Upto 15 Metres
60cm	Upto 20 Metres
80cm	Upto 25 Metres
100cm	Over 25 Metres
